

ID	Título
13	Operating Planning Voltage Security Computation using Stratified Sampling
18	ASSESSMENTS FOR THE IMPACT OF HARMONIC CURRENT DISTORTION OF NON LINEAR LOAD IN POWER SYSTEM HARMONICS
21	CHARACTERIZATION AND SOFTWARE APPLICATION FOR PROBABILISTIC EVALUATION OF HARMONICS IN ELECTRIC POWER DISTRIBUTION SYSTEMS
22	CORONA EFFECT IN FREQUENCY DEPENDENT TRANSMISSION LINE MODELS
23	MONITORING POWER QUALITY BEYOND EN 50160 AND IEC 61000-4-30
24	Monte Carlo Analysis of the Trade-Off between Trading and Security in a Three-Area System
25	On the coordinated control of multiple HVDC links
26	A Survey on Voltage Dip Events in Power Systems
28	DESIGN OF A Hinf CONTROL FOR A VARIABLE SPEED WIND TURBINE
29	Selecting Wavelet Function for Power Quality Disturbances Detection
32	Optimal Placement of Distributed Generation in Electric Power System
34	Numerical Distance Protection Performance Analysis in Short and Long Transmission Lines using Real Time Digital Simulation
37	Full Range AC Filter with Multilevel IGBT Converter for Transmission and Distribution Systems
39	Using State-Space Techniques to Represent Frequency Dependent Single-phase Lines Directly in Time Domain
40	Voltage Regulator Modeling for the Three-Phase Power Flow to Distribution Network.
41	Electricity Trade for Renewable Sources in Brazil
42	THE COLOMBIAN 2007 BLACK OUT
43	A New, Ultra-low-cost Power Quality and Energy Measurement Technology
44	Study on Security Protection of Transmission Section to Prevent Cascading Tripping And Its Key Technologies
45	Study on closed-loop transient stability emergency control based on Wide Area Measurement
47	Analysis of the impacts of distributed generation sources considering the appropriate choice of parameters in a multiobjective approach for distribution system planning
56	Modeling the repair process of a power distribution system
57	Repair models of power distribution components
58	Equivalent model of the Argentinian electrical power system for stability analysis of the Uruguayan network
59	Secure Protection against Synchronous and Asynchronous Power Swings
61	Robust State Estimator applied to the Ecuadorian Electric Power System
63	Computation of Voltage Stability Margins of Distribution Systems
66	United States and Mexico New Cross-Border Connections

ID	Título
68	THE APPLICATION OF PERFORMANCE FOCUSED MAINTENANCE (PFM) STRATEGY FOR DISTRIBUTION EQUIPMENT
69	Decoupled solution of radial and weakly meshed distribution networks through a backward method
79	Nodal marginal pricing: analysis of transmission revenue WIND ENERGY INTEGRATION INTO 110 KV SYSTEM -
83	IMPACT ON POWER QUALITY OF MV AND LV NETWORKS
87	Design of A Real-time Substation Communication System for Integrated Protection
88	A Comparative Analysis of Different Power Flow Methodologies
89	Self-tuning Automatic Voltage Control of a Synchronous Generator
90	Multi-Areas Optimal Reactive Power Flow
91	A NEW CONTROL STRATEGY OF VARIABLE SPEED WIND TURBINE GENERATOR FOR THREE-PHASE GRID-CONNECTED APPLICATIONS
92	MODELING AND CONTROL OF GRID-CONNECTED PHOTOVOLTAIC ENERGY CONVERSION SYSTEM USED AS A DISPERSED GENERATOR
93	DYNAMIC MODELING AND CONTROL DESIGN OF DSTATCOM WITH ULTRA-CAPACITOR ENERGY STORAGE FOR POWER QUALITY IMPROVEMENTS
94	Evaluation of the Wind Power Converter System Impact on the Electrical Power System Performance
95	Dimensional Standards for Bushings Applied to Liquid Filled Power Transformers and Reactors; Why they are Important to your Electric Power System
96	SHORT-TERM INVESTMENT DECISIONS ON DISTRIBUTION SYSTEMS. A PROBABILISTIC METHODOLOGY AND COMPARISON WITH A FUZZY METHODOLOGY
99	Integrated Positional Protection of Transmission Systems Using Global Positioning System
104	New methodology for diagnosing mechanical faults in power transformer windings through the Sweep Frequency Response Analysis (SFRA) based on artificial intelligence techniques for handling of uncertainty
106	Eliminating Cumulative Errors Generated During Execution of Floating-Point Calculations in Protective Algorithms with TMS 320
110	A statistical analysis of loss factor to determine the energy losses
111	Flexible Decision Making-Based Framework for Coping with Risks present in Transmission Expansion Plans
114	Lightning performance of overhead distribution network assessment using fuzzy ground flash density concept
115	Impact of Dispersed Generation in the Power System Performance
116	Installation and Monitoring Experiences of the First Synchronized Measurement System Installed in the Brazilian National Grid
117	Reliability Assessment in Power Distribution Networks by Logical Relations and Matrix Operations

ID	Título
119	A Study About The Sources of Error of Impedance-Based Fault Location Methods
120	THE LEAKAGE CURRENT AS A DIAGNOSTIC TOOL FOR OUTDOOR INSULATION
121	IEC 61850 Concepts for the Protection Engineer
124	OBSERVABILITY ANALYSIS BASED ON PATH GRAPH CONCEPTS AND TRIANGULAR FACTORIZATION OF THE JACOBIAN MATRIX
125	EVALUATION OF THE EFFECTS OF NONLINEAR LOADS ON ROUNDROTOR SYNCHRONOUS GENERATORS
128	HARMONIC ANALYSIS OF THE ELECTRICAL SYSTEM OF AN INDUSTRY OF ALUMINUM AT THE CONNECTION POINT WITH THE BRAZILIAN NATIONAL INTERCONNECTED SYSTEM
129	Voltage quality control at distribution systems applying a fuzzy state estimator
130	New methodology to tune adaptive and robust Multi-Band PSSs.
131	A COMPARATIVE STUDY OF THE DAMPING OSCILLATION FUNCTION OF TCSC AND UPFC
132	Strategic bidding in Colombian Electricity market using a multi-agent learning approach
134	DSP Based Implementation of Zero Average Dynamics Strategy: Application to Power Inverters Control
138	Corrosive Sulfur Phenomena Mitigation by Using Natural Ester Based Dielectric Coolant - Field Experience in Latin America
139	Integrated Scheme for High Impedance Fault Detection
141	Impedance Phase Faults Location Algorithm for UHV Transmission Lines
144	A STUDY ON EMBEDDED GENERATION MODES ON DISTRIBUTION SYSTEM WITH EMBEDDED GENERATORS
145	Director of protocol research & testing center, Ketop Lab(National Center for Quality Supervision & Testing of Relay & Protection Equipment)
147	Deployment of a SCADA Integrated Wide Area Monitoring System
148	SENSITIVITY ANALYSIS APPLIED TO THE PLANNING OF POWER SYSTEM OPERATIONS IN TRANSMISSION LINE OUTAGE
153	Field Experience with On-Line Monitoring of Capacitance and Tangent Delta in Condensive Bushings
154	Assessment of the power swing blocking functions of line protective relays for a near scenario of the Uruguayan system
159	Simulations of electromagnetic transients in a transmission line using state variables
164	STABILITY CONDITIONS FOR A STOCHASTIC DYNAMIC OPTIMIZER FOR OPTIMAL DISPATCH POLICIES IN POWER SYSTEMS WITH HYDROELECTRICAL
165	A BILEVEL PROGRAMMING APPROACH FOR POWER SYSTEM OPERATION PLANNING CONSIDERING VOLTAGE STABILITY AND ECONOMIC DISPATCH

ID	Título
166	WIND FARM: DYNAMIC MODEL AND IMPACTS ON A WEAK POWER SYSTEM
167	Fuzzy and Adaptive Control Methodologies Applied in the Improvement of the Power Stability of a Laboratory Energy System
168	planning, interconnection and operation of transmission and distribution systems
169	Improved transient hot-spot temperature calculation of high voltage bushings.
170	COMBINED OVERHEAD-CABLE LINE MODELS FOR GROUNDING-SYSTEM ANALYSIS
173	Approach for Determining the Optimum Set of Spot Frequencies to be used during a Sweep Frequency Response Analysis (SFRA) for Power Transformer Diagnosis.
180	Discrete-Time Variable Structure Control for Switching Converters
181	Asymmetric Transmission Line Analyses based on a Constant Transformation Matrix
182	Single Real Transformation Matrix Application for Asymmetrical Three-phase Line Transient Analyses
183	Parameter identification of a synchronous machine linear model by using online measurements
186	Statistical based method used to determine the fault location in radial power systems
187	Developing a maintenance strategy based on RCM applied to power transmission lines
193	Electrical network branch parameters validation for effects of state estimation
195	ADJUSTABLE SPEED DRIVES SUPPLIED WITH UNBALANCED VOLTAGES: STUDY UNDER COMPLEX VOLTAGE UNBALANCE FACTOR PARAMETER
196	DISTRIBUTED GENERATION: EXPLOITATION OF THE ISLANDING OPERATION ADVANTAGES
197	DISTRIBUTED GENERATION: SHORT CIRCUIT CURRENT SUPPLIED FOR INDUCTION GENERATORS
198	Robust State Estimator Based on Least Median of Squares Method
199	EFFICIENCY ANALYSIS OF POWER FLOW METHODS
200	A POWER FLOW METHOD COMPUTATIONALLY EFFICIENT FOR LARGESCALE DISTRIBUTION SYSTEMS
203	UPFC Controller Design for Power System Stabilization with Particle-swarm Optimization Algorithm
204	Turbo-generator Torsional behavior using the Participation Factors and considering the Static Loads Model
205	Analysis to the firm energy market proposal for the Colombian electricity market.
206	Determination of Interrupting Ratings of MV Switchgear Breakers for Power Plant Applications by IEEE Methods
207	Estimation of Short Circuit Capability of Generator Circuit Breaker for a Generator Fed Fault
208	Operation simulation of out of step relays using comtrade files and power system simulation analysis
210	A new vision about real average load of Distribution Transformers in Latin America Distribution Networks

ID	Título
211	Chraracterization of atmospheric discharges in El Valle de Aburrá
216	The importance of the fault impedances, infeed effect and the support of the software tools for the calculation of the settings in the distance protection. Practical experiences
219	Calculation and assessment of Distribution Networks Adapted
220	A Quality Index Applied to Transient Response Evaluation of a Synchronous Generator
221	Multiobjective allocation of remotely controlled switches in an electric distribution power system
222	An Application of PHAP in Power System Planning
228	Modeling of bidding prices using soft computing techniques
229	BUSINESS BENEFITS OF IMPLEMENTING A NEW HYDRO-ELECTRIC PLANT CONTROL SYSTEM
231	Vulnerability Analysis of Power Systems using type-2 Fuzzy Logic
232	Genetic Algorithms and Voronoi Polygons Applied to Decision Making in the Distribution Expansion Problem
235	Bidding prices modeling in colombian electricity market using logistic regression models
236	Modeling of excitation limiters of a hydroelectric plant
237	Management and solution of the electric restraints in the Colombian wholesale electricity market
241	A Novel Fuzzy Number Based Method to Model Aggregate Loads for Harmonic Load- Flow Calculation
244	LOAD FORECASTING WITH NEURAL NETWORKS FOR ANTIOQUIA-CHOCO REGION.
245	Template Based Automatic Voltage Control
248	Integrated Natural Gas and Electricity Market: the Challenge of Operating a New Energy Network Market. A Survey State's of Art.
249	Use of Synchronized Phasor measurement System for Monitoring Power System Stability and system dynamics in Real-time.
250	Support Vector Machines for on-line Security Analysis of Power Systems
252	The Technology and Benefits of Dispatchable Standby Generation – A Virtual Peaking Power Resource
254	Fuzzy Assessment of Electrical Energy Costs of Distributed Generation in Latin America. Comparison with Retail Supply Costs
256	High-Speed Protection for Medium Voltage Distribution Networks with Distributed Generation
259	Adaptative predictive approach for emergency voltage control of power grids
260	WIND FARMS IN WEAK GRIDS. ENHANCEMENT OF RIDE THROUGH CAPABILITY USING CUSTOM POWER SYSTEMS
264	Tool Development For Determination Of Power Quality Parameters
277	Wind Generation and Multilevel VSC-NPC Integration to Distribution Networks: Analysis under Steady-State and Transient Conditions
282	Software utilization scheme for improving fault analysis

ID	Título
289	Study of the Vegetal oil as a substitute for mineral oils in distribution transformer
290	Super components contingencies for severity analysis of power system
291	Sensitivity analysis on different types of electrical network modelling for the security constrained hydrothermal scheduling problem
292	Using Genetic Algorithms and Gradient Method to Obtain Transfer Functions or Equivalent Circuits of Grounding Systems Impedance
295	REMUNERATIVE PROPOSAL FOR BLACKSTART GENERATING UNITS THAT REALIZED THIS ANCILLARY SERVICE IN SIN
301	Power systems critical areas by using sensitivities and participation factors for on line applications
303	Subsynchronous Resonance Analysis after Barra do Peixe 230 kV Fixed Series Compensations installation at 230 kV Mato Grosso (Brazil) Transmission System
304	Optimization of Measurement Points for State Estimation In Distribution Networks
305	Review of developed demand side management programs including different concepts and their results
314	The effective constitutive model of grain-oriented Fe-Si laminations core under orthogonal magnetization
317	On the effect of magnetic coupling between phases in three-phase-threelimb power transformers modeling
318	A New Approach to WindingCapacitance Dividing Method for the Generator with Considerable WindingDistributed Capacitance
319	Improvement in the Scheme of VoltageControl Regulator
320	Analysis of the Torsional Modes of the Turbine-Synchronous Generator Group
322	POWER SYSTEM RELIABILITY CONSIDERING COMBINED CYCLE PLANTS
324	TRANSFERRED VOLTAGES IN MULTIGROUNDED SYSTEMS
325	Optimal power flow with security constraints and transmission costs solved by a PSO
327	Details on the implementation of a conventional StatCom's Control
328	Issues Affecting the Electricity Transmission and Distribution System in Mexico
331	Transmission Network Expansion Planning Considering Uncertainty in Generation and Demand
332	Transmission Network Expansion Planning Considering Multiple Generation Scenarios
333	Errors of using simulated and real voltage and current registers for fault location in power distribution systems
334	Series resonant overvoltages due to neutral grounding method in petrochemical power systems
335	Influence of Power Transformer Winding Connections on the Propagation of Voltage Sags through Electric System
337	The Czech Republic Possibilities in Utilisation of Renewable Power Sources
338	Control of Micro grids with Renewable Power Sources

ID	Título
339	Monitoring and Analysis of Research PV Modules at University of West Bohemia in Pilsen and in the Czech Republic
340	Renovation of the Supervisory System in Salto Grande
341	Measurement of the Harmonic Contents of Electric Signals Using FPGA and Switched Capacitor Filters
342	A COMPUTATIONAL APPROACH FOR CONSUMERS REFUNDING ANALYSIS DUE TO EQUIPMENT DAMAGES
344	Modeling Water Tree Phenomenon for Insulated Cable Loss Current Estimation
345	New Methodology to Faults Detection in Induction Motors via MCSA
346	DIFFERENTIAL PROTECTION OF THREE PHASE TRANSFORMERS USING WAVELET TRANSFORMS
347	Classification of Sags according to its origin based on waveform similarity
349	Frequency Domain Modeling of Monopolar High Voltage Direct Current Link Using Three-Phase Harmonic Current Injection Method
350	Determination of Unusual Voltage Dip Events in Power Systems
352	AVALIATION OF THE POTENTIAL OF METHAN GENERATION, ELECTRICAL ENERGY AND CARBON CREDIT FROM THE GOIÂNIA LANDFILL
353	A Business Plan focused on Landfill Gas according to the current Waste Management of Goiânia City
355	METHODOLOGY FOR THE FORESIGHT ANALYSIS OF THE ELECTRICITY MARKETS.
356	ANN-based Short-Term Load Forecasting in Bogota
357	Selection of characteristics from protective relays to locate faults in power distribution systems using Support Vector Machines
358	New Technology for Looped Distribution Feeders
359	Transients and Partial Discharges Recording in Power Reactors During Normal Operation
360	Underground Power Cable On Site Testing Experience Using Resonant High Voltage Power Supplies and Partial Discharge Ultra Wide Band Methods
362	Analysis of some Indexes to Assess Voltage Stability of AC Transmission Networks
364	ANT COLONY BEHAVIOR BASED METHOD FOR DISTRIBUTION SYSTEM RECONFIGURATION FOR LOSS REDUCTION
365	Estimation of Electrical Machine Speed Using Sensorless Technology and Neural Networks
366	Technical Strategies for High-Impedance Fault Experiments in Power Distribution System
367	Efficient Fuzzy Approach for Allocating Fault Indicators in Power Distribution Lines
368	Normal and emergency thermal ratings of transmission lines INDICATORS QUALITY OF SERVICE IN THE
370	TRANSMISSION POWER SYSTEMS IMMERSSED AT THE REGULATORY FRAMEWORK ELECTRIC

Full Papers Received at 27/05/2008 and 10:37 (GMT-5)

ID	Título
371	A Fuzzy Model for Customer Outage Cost Evaluation
375	Replanning application for massive public transportation in Colombia, based on electrical traction.
377	ELECTRIC & MAGNETIC FIELD ASSESSMENT FOR LIVELINE WORKERS NEXT TO A 132 KV TRANSMISSION LINE CONDUCTOR
